Understanding the Key Concepts

Redox Reactions

Redox (reduction-oxidation) reactions involve the transfer of electrons between species. In an electrochemical cell, oxidation occurs at the anode, releasing electrons, while reduction occurs at the cathode, accepting electrons.

Electrode Potentials

Each half-cell has a characteristic electrode potential, measurable relative to the standard hydrogen electrode. The cell potential (voltage) indicates the driving force behind the redox reaction.

Standard Cell Potential (E°cell)

The standard cell potential is calculated by:

\[E^\circ_{cell} = E^\circ_{cathode} - E^\circ_{anode} \]

where \(E^\circ_{cathode} \) and \(E^\circ_{anode} \) are standard reduction potentials.

Materials and Equipment Used in the Lab
